Reasons For Allowance

The prior art of record does not disclose or fairly suggest a method for treating tissue with areas of varying pigmentation by sensing and using the reflected light from a plurality of specific sub-areas to determine the application of light treatment to each specific sub-area to normalize the pigmentation in the total treatment area. U.S. Patent 5,944,748 to Mager et al. teaches a method for treating lesions in tissue using detection of luminescence from tissue treated with a photosensitizer to control the treatment source. While similar, the detection of luminescence is different than detection of reflected light as required in the application.

Drawings

This application lacks formal drawings. Applicant is required to submit new formal drawings.
